

In the Specification

The following is a marked-up version of the specification with the language that is underlined (“ ”) being added and the language that contains strikethrough (“”) being deleted:

Page 9, lines 9 through 16.

Electrical encoding can be alternatively or additionally provided. For instance, one or more of the buttons 304 can comprise an electrically conductive pin 314' that is adapted to contact a spring contact 318 disposed in each of the pin openings. To complete a circuit, the button 304 can be provided with a first conductor 320 that is adopted to mate with a second conductor 322 provided on the button receiving member 306. Although such an electrical encoding arrangement has been shown, persons having ordinary skill in the art will appreciate that manifold alternative arrangements are feasible.
